Exhibit package — G.5, G.6, G.7

Project: Sanctions Territory Reference
Preparer: Divine Linus
Repository: https://github.com/Divine16/sanctions-territory-reference
Zenodo (dataset v0.1.0): https://zenodo.org/records/23677148 · DOI 10.5281/zenodo.23677148
Prepared: 2026-11-02 (UTC)
Artifact folder: `exhibits/artifacts/` (regenerate with `python3 scripts/generate_exhibit_artifacts.py`)

Master checklist

ID	Requirement	Status	Location in this package
G.5.1	Landing page PDF with **live URL and date**	**Pending**	§ G.5.1 — print from Pages once live; interim screenshot `artifacts/G5-01-landing.png`
G.5.2	Screenshot — under-blocking	**Done**	§ G.5.2 · `artifacts/G5-02-under-blocking.png`
G.5.3	Screenshot — over-blocking	**Done**	§ G.5.3 · `artifacts/G5-03-over-blocking.png`
G.5.4	Screenshot — partial coverage (multi-code territory)	**Done**	§ G.5.4 · `artifacts/G5-04-partial-coverage.png`
G.5.5	Network tab — zero requests (privacy)	**Pending**	§ G.5.5 — you capture in browser (DevTools)
G.6.1	Data file — every record with citation	**Done**	§ G.6.1 · `artifacts/G6-records-with-citations.md` + `data/territories.json`
G.6.2	CHANGELOG.md	**Done**	§ G.6.2
G.6.3	Staleness workflow YAML + run record	**Partial**	§ G.6.3 · YAML included; **run record** from GitHub Actions
G.6.4	`validate.py` — two enforced rules	**Done**	§ G.6.4
G.6.5	CI failing on deliberately broken record	**Pending**	§ G.6.5 · `exhibits/G.6-ci-failure-demo.md`
G.7.1	Feed URL	**Done**	§ G.7.1
G.7.2	Retrieved JSON + retrieval timestamp	**Partial**	§ G.7.2 · local build copy until Pages returns 200
G.7.3	Build script — feed from single data file	**Done**	§ G.7.3
G.7.4	Wayback capture	**Pending**	§ G.7.4 — after feed URL is live

---

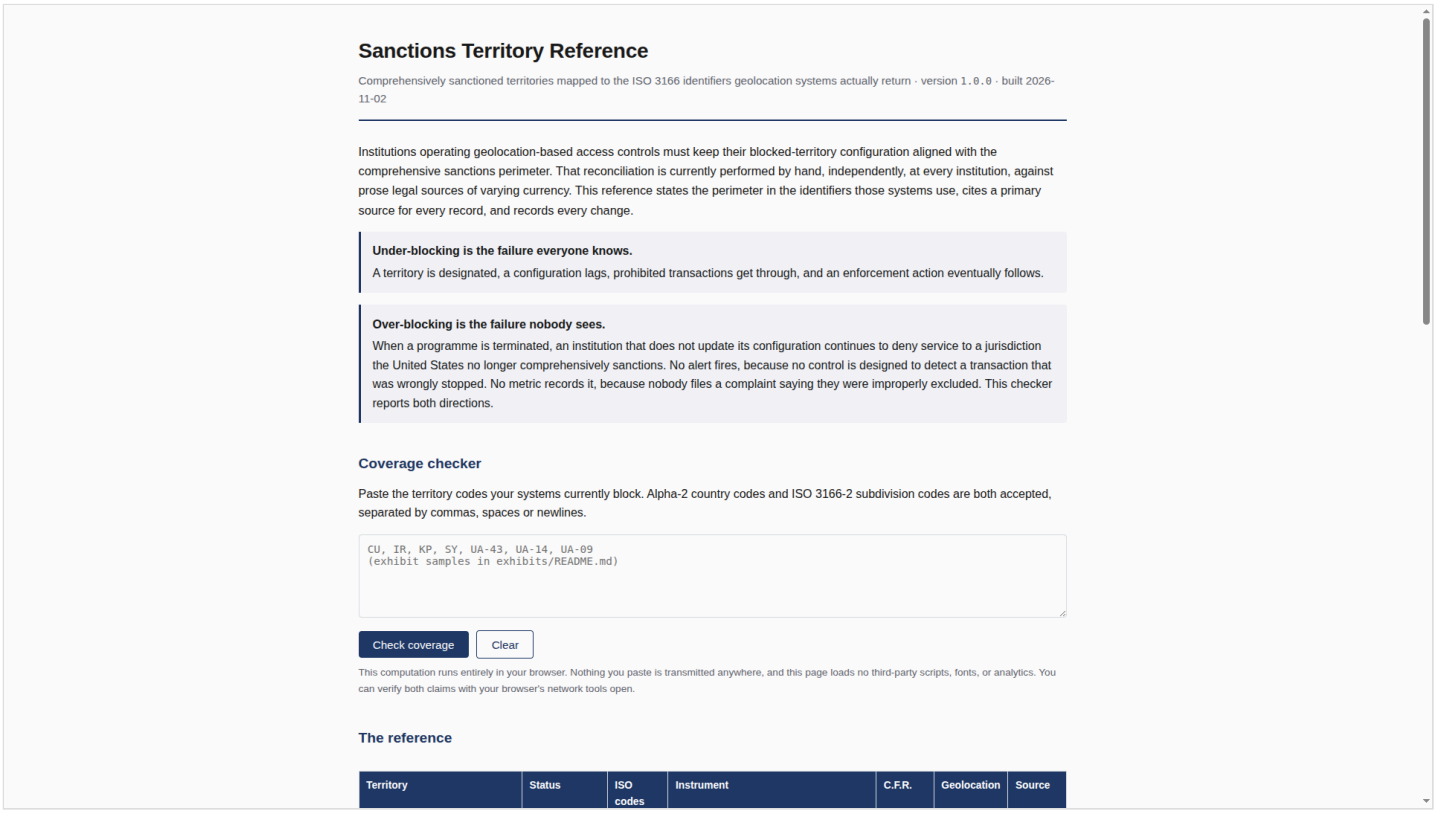

G.5 — Territory site and coverage checker

Intended live site: https://divine16.github.io/sanctions-territory-reference/
(Enable GitHub Pages: branch `main`, folder `/docs`. As of package preparation the feed URL returned 404 until Pages is enabled.)

G.5.1 Landing page (PDF + URL + date)

Action: Open the live site → **Print** → **Save as PDF** with browser headers/footers enabled so the PDF shows URL and date.

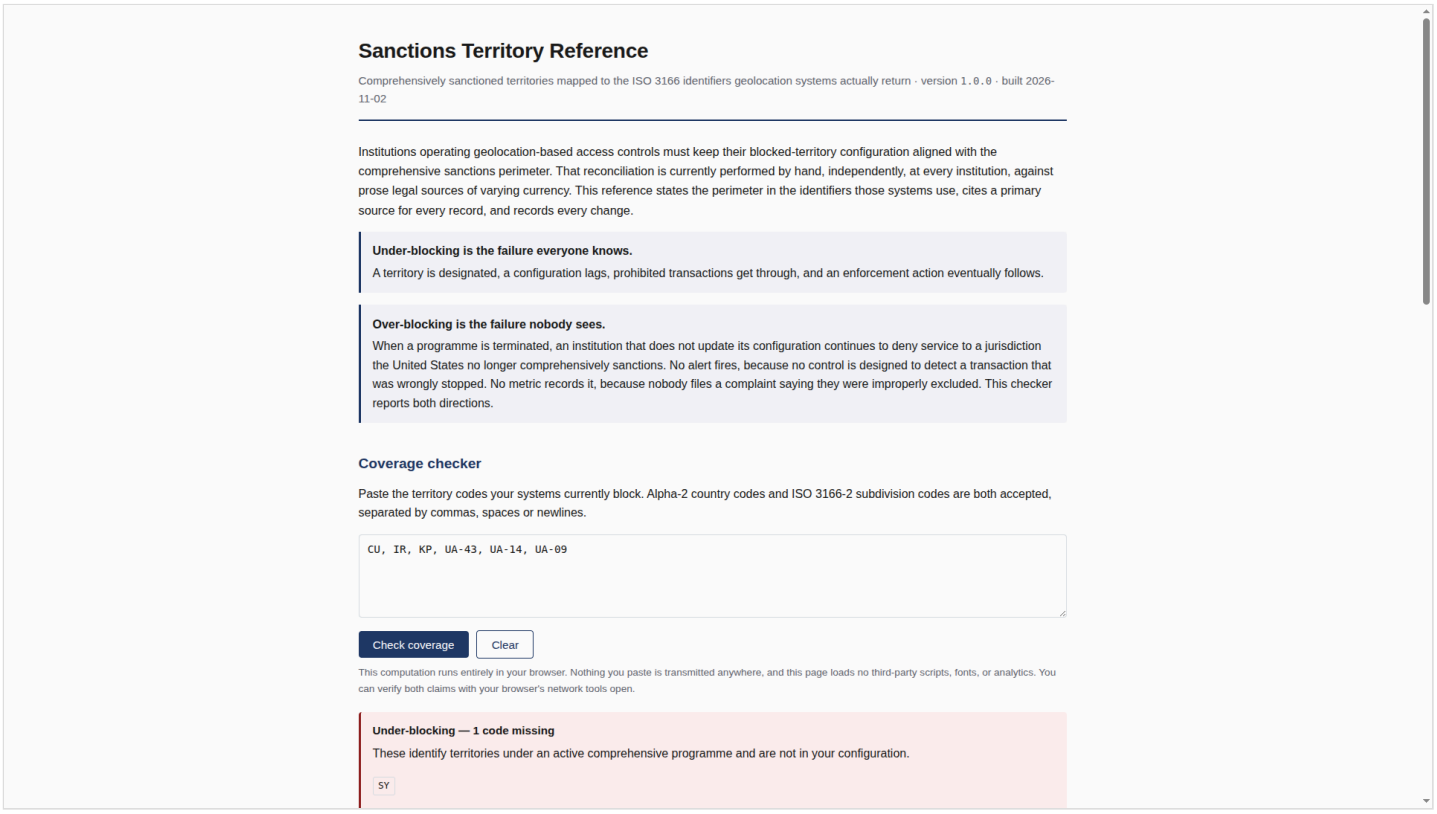

Interim evidence (local preview, 2026-11-02 build):

G.5.2 Under-blocking

Input pasted (missing active code **SY**):

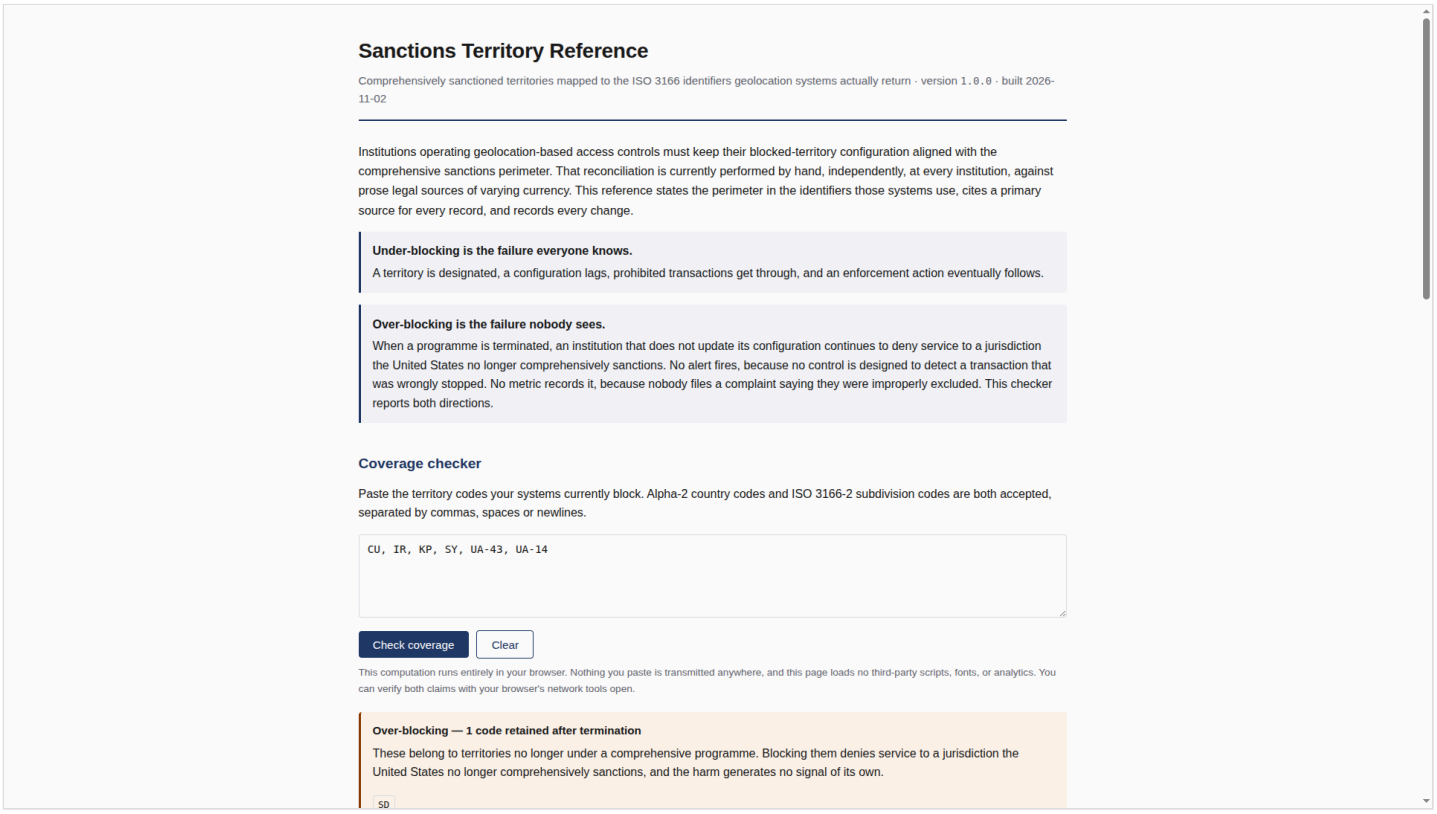

```
CU, IR, KP, UA-43, UA-14, UA-09
```

G.5.3 Over-blocking

Input pasted (terminated **SD** still blocked):

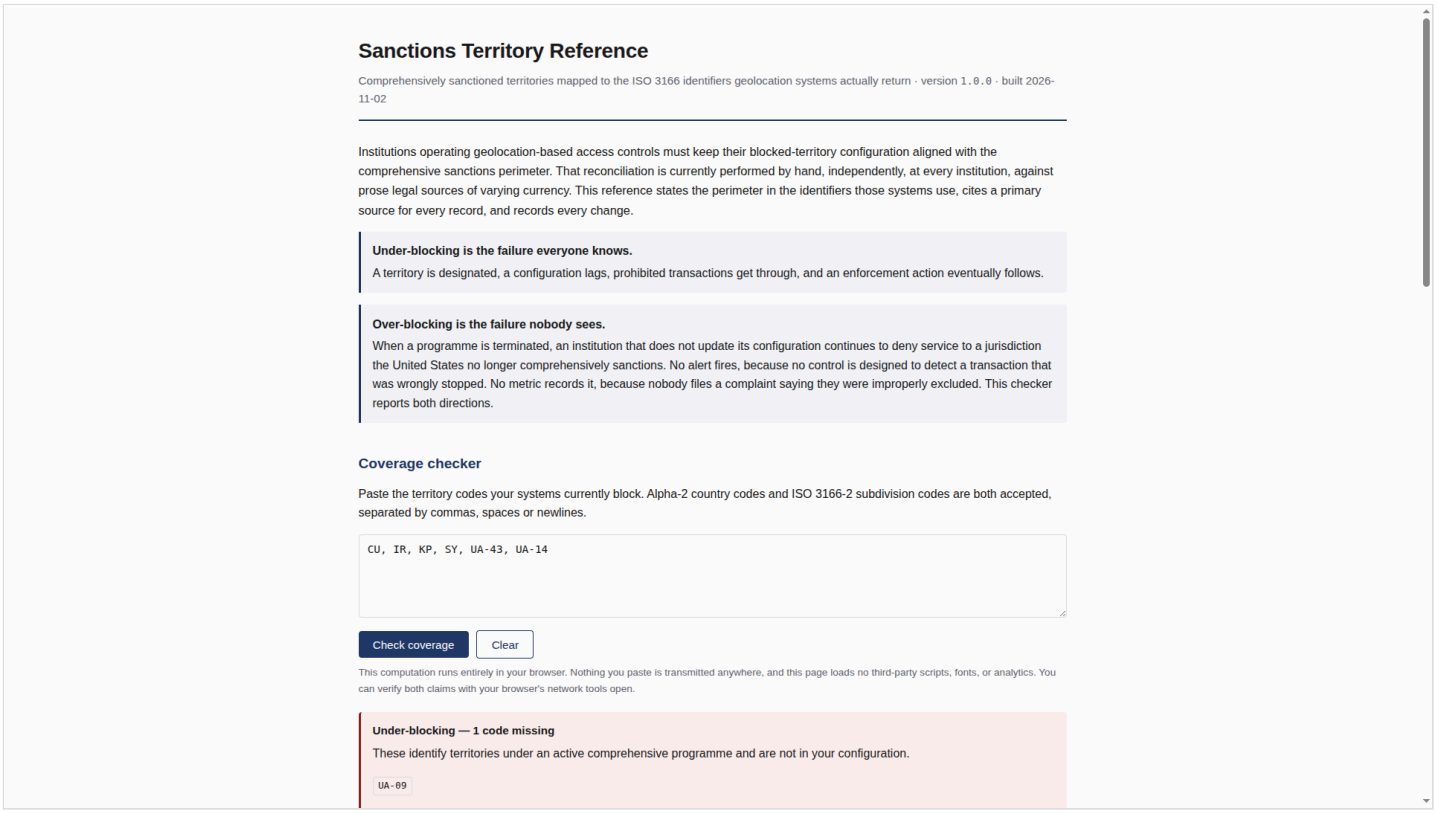

```
CU, IR, KP, SY, UA-43, UA-14, UA-09, SD
```

G.5.4 Partial coverage

Input pasted (territory with **UA-14** and **UA-09** — only one present):

```
CU, IR, KP, SY, UA-43, UA-14
```

G.5.5 Privacy — network tab (zero requests)

Action (required for final submission):

1. Open the **live** site (not required to be online for checker logic; must be live URL for exhibit narrative).
2. Open DevTools → **Network**.
3. Enable **Preserve log**; optional: filter **Fetch/XHR**.
4. Reload the page.
5. Paste any checker sample and click **Check coverage**.
6. Screenshot the Network panel showing **no** outbound API/analytics requests (only the initial `index.html` document load).

Claim on page: *"This computation runs entirely in your browser… this page loads no third-party scripts…"* — the network screenshot is the demonstration.

Attach: `artifacts/G5-05-network-zero-requests.png` *(add after capture)*

G.6 — Methodology, citations, change log

G.6.1 Data file — records and primary-source citations

Source of truth: `data/territories.json`. Summary table (generated):

See file: artifacts/G6-records-with-citations.md

ID	Official name	Status	ISO codes	Primary source	last_verified	verified_by
cuba-comprehensive	Cuba	active	CU	https://www.ecfr.gov/current/title-31/subtitle-B/chapter-V/part-515	2026-10-26	Divine Linus
iran-comprehensive	Iran	active	IR	https://www.ecfr.gov/current/title-31/subtitle-B/chapter-V/part-560	2026-10-26	Divine Linus
north-korea-comprehensive	North Korea	active	KP	https://www.ecfr.gov/current/title-31/subtitle-B/chapter-V/part-510	2026-10-26	Divine Linus

G.6.2 CHANGELOG.md

```
# Change log

Append-only. Every modification to `data/territories.json` is recorded here with
the instrument that caused it. Entries are never edited or removed — a correction
is a new entry stating what was wrong and what it now says.

Format: `YYYY-MM-DD — territory — change — causing instrument — who`

---

## 2026-10-26

- 2026-10-26 — Cuba — initial active comprehensive record — Cuban Assets Control Regulations (31 C.F.R. Part 515) — Divine Linus
- 2026-10-26 — Iran — initial active comprehensive record — Iranian Transactions and Sanctions Regulations (31 C.F.R. Part 560)
- 2026-10-26 — North Korea — initial active comprehensive record — North Korea Sanctions Regulations (31 C.F.R. Part 510) — Div
- 2026-10-26 — Syria — initial active comprehensive record — Syrian Sanctions Regulations (31 C.F.R. Part 542) — Divine Linus
- 2026-10-26 — Crimea region of Ukraine — initial active regional record — Executive Order 13685 (2014) — Divine Linus
- 2026-10-26 — Donetsk/Luhansk regions of Ukraine — initial active regional record with scope/ISO mismatch note — Executive Ord
- 2026-10-26 — Sudan — initial terminated comprehensive record (programme lifted) — Executive Order 13942 (2020); 31 C.F.R. Par
```

(Canonical copy: `CHANGELOG.md` / `artifacts/G6-CHANGELOG.md`.)

G.6.3 Staleness workflow + run record

Workflow file: `.github/workflows/staleness.yml`

```
name: Verification staleness

on:
```

```
  schedule:
    - cron: "0 14 * * 1"
  workflow_dispatch:

permissions:
  contents: read
  issues: write

jobs:
  check:
    runs-on: ubuntu-latest
    steps:
      - uses: actions/checkout@v4

      - name: Report records older than 90 days
        id: stale
        run: |
          set +e
          python3 scripts/validate.py --staleness 90 2>&1 | tee staleness.log
          code=$?
          echo "exit_code=$code" >> "$GITHUB_OUTPUT"
          exit 0

      - name: Open issue when stale
        if: steps.stale.outputs.exit_code != '0'
        uses: actions/github-script@v7
        with:
          script: |
            # … opens GitHub issue with staleness.log when threshold exceeded
```

Run record (attach):

1. GitHub → **Actions** → **Verification staleness** → **Run workflow** → Run.
2. Screenshot or download log showing `All records verified within 90 days.` (success) or issue body (failure path).
3. Save as `artifacts/G6-staleness-run-screenshot.png` or export log to `artifacts/G6-staleness-run.log`.

G.6.4 Two enforced rules (`validate.py`)

No record ships without a citation; no record ships unverified.

```
        # ---- the integrity rules that matter
        src = r.get("primary_source")
        if not isinstance(src, str) or not src.strip():
            p.add(where, "primary_source is required — no record ships without a citation")
        elif PLACEHOLDER.search(src):
            p.add(where, "primary_source is still a placeholder")

        if r.get("verified") is not True:
            p.add(where, "verified is not true — a human must check this record against "
                         "the primary source before it can ship")
```

Full excerpt: `artifacts/G6-validate-enforced-rules.py.txt` · source: `scripts/validate.py`.

CI on every push: `.github/workflows/ci.yml` runs `make validate`, `make build`, and fails if `docs/` drift.

G.6.5 CI failure on deliberately broken record

Follow [G.6-ci-failure-demo.md](): branch with `"verified": false` → failed **CI** job **Validate data** → screenshot.

Attach: `artifacts/G6-ci-failure-screenshot.png`

G.7 — Machine-readable feed

G.7.1 Feed URL

```
https://divine16.github.io/sanctions-territory-reference/feed.json
```

Stable path in repository after build: `docs/feed.json`.

G.7.2 Retrieved JSON + timestamp

Metadata (`artifacts/G7-feed-retrieval-metadata.json`):

```
{
  "retrieved_at_utc": "2026-11-02T19:29:55.444942+00:00",
  "feed_url": "https://divine16.github.io/sanctions-territory-reference/feed.json",
  "retrieval_method": "local_build_copy",
  "note": "Replace with live curl capture once GitHub Pages returns 200.",
  "live_url_error": "HTTP Error 404: Not Found",
  "source_path": "docs/feed.json"
}
```

Payload: `artifacts/G7-feed-retrieved-2026-11-02T192955Z.json`

After Pages is live, refresh:

```
python3 scripts/generate_exhibit_artifacts.py
curl -sS -D exhibits/artifacts/G7-feed-http-headers.txt \
  -o exhibits/artifacts/G7-feed-retrieved-live.json \
  'https://divine16.github.io/sanctions-territory-reference/feed.json'
date -u +'%Y-%m-%dT%H:%M:%SZ' > exhibits/artifacts/G7-feed-retrieved-live.timestamp.txt
```

G.7.3 Build script — single source file

From `scripts/build.py` (only `data/territories.json` is read for feed records):

```
    # ---- the feed: the same records, nothing added, nothing hidden
    feed = {
        "name": "Sanctions Territory Reference",
        "version": version,
        "generated": built,
        "source_file": "data/territories.json",
        "record_count": len(territories),
        "active_count": sum(1 for t in territories if t["status"] == "active"),
        "notice": ("Comprehensive territorial sanctions programmes only. ..."),
        "territories": territories,
    }

    OUT.mkdir(parents=True, exist_ok=True)
    (OUT / "feed.json").write_text(
        json.dumps(feed, indent=2, ensure_ascii=False) + "\n", encoding="utf-8")
```

Full excerpt: `artifacts/G7-build-feed-generation.py.txt`.

G.7.4 Wayback capture

After the feed URL returns **200**:

1. Open https://web.archive.org/save
2. Save: `https://divine16.github.io/sanctions-territory-reference/feed.json`
3. Screenshot confirmation and archived page.
4. Attach: `artifacts/G7-wayback-feed-screenshot.png` and note the `web.archive.org` URL here:

```
Wayback URL: _____________________________________________
Captured on: _____________________________________________
```

Exporting this package as one PDF

From repo root (no pandoc required):

```
pip install markdown    # once
make exhibit-pdf        # runs make exhibits, then writes PDF via Chrome headless
```

Output: `exhibits/EXHIBIT-PACKAGE-G5-G7.pdf` (and `EXHIBIT-PACKAGE-G5-G7.html`).

Alternative: open `exhibits/EXHIBIT-PACKAGE-G5-G7.html` in Chrome → **Print** → **Save as PDF** (enable background graphics).

Optional: `sudo apt install pandoc` then `pandoc exhibits/EXHIBIT-PACKAGE-G5-G7.md -o exhibits/EXHIBIT-PACKAGE-G5-G7.pdf --resource-path=exhibits`

Final bundle to submit: this PDF + `artifacts/` folder (or zip `exhibits/`).
